No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (Operations Staff, P.O. Box 765, Schenectady, New York 12301), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1978 articles are the same as those shown for current articles.

CONTENTS OF VOLUME 45

Number 1, June 1978

GILBERTO PAYARES AND N. ERCOLI. *Schistosoma mansoni:* Virulence and Immunogenicity of Immobilized Cercariae 1

VERA BONGERTZ AND KLAUS DIETER HUNGERER. *Trypanosoma cruzi:* Isolation and Characterization of a Protease 8

L. K. EVELAND AND S. I. MORSE. *Schistosoma mansoni:* Infectivity and Immunizing Effects of *In Vitro* Derived Schistosomula Attenuated by X Irradiation 19

BRUCE T. WELLDE, ROBERT M. KOVATCH, DAVID A. CHUMO, AND DALE E. WYKOFF. *Trypanosoma congolense:* Thrombocytopenia in Experimentally Infected Cattle 26

ERIC JACQUELINE, ALAIN VERNES, ET JEAN BIGUET. *Trichinella spiralis:* Facteurs Immunitaires Inhibiteurs de la Production de Larves. I. Mise en Evidence *in Vivo* et *in Vitro* chez la Souris 34

ERIC JACQUELINE, ALAIN VERNES, DANIEL BOUT, ET JEAN BIGUET. *Trichinella spiralis:* Facteurs Immunitaires Inhibiteurs de la Production de Larves. II. Première Analyse *in Vitro* des Facteurs Humoraux et Sécrétoires Actifs chez la Souris, le Rat, et la Miniporc Infestés ou Immunisés 42

C. G. D. BROWN, M. P. CUNNINGHAM, L. P. JOYNER, R. E. PURNELL, D. BRANAGAN, G. L. CORRY, AND K. P. BAILEY, *Theileria parva:* Significance of Leukocytes for Infecting Cattle 55

ERIC S. LOKER. *Schistosomatium douthitti:* Effects of *Lymnaea catascopium* Age on Susceptibility to Infection 65

DONATO CIOLI, KONSTANZE BLUM, AND ANDREAS RUPPEL. *Schistosoma mansoni:* Relationship between Parasite Age and Time of Spontaneous Elimination from the Rat 74

WALTER M. KEMP, STEPHEN C. MERRITT, AND JAMES G. ROSIER. *Schistosoma mansoni:* Identification of Immunoglobulins Associated with the Tegument of Adult Parasites from Mice 81

GARY L. UGLEM, ROBERT D. LOVE, AND JOHN H. EUBANK. *Hymenolepis diminuta:* Membrane Transport of Glucose and β-Methylglucoside 88

JAMES ALEXANDER AND R. S. PHILLIPS. *Leishmania tropica* and *Leishmania mexicana:* Cross-Immunity in Mice 93

WANDERLEY DE SOUZA, TÉCIA ULISSES DE CARVALHO, MARLENE BENCHIMOL, AND EGLER CHIARI. *Trypanosoma cruzi:* Ultrastructural, Cytochemical and Freeze-Fracture Studies of Protein Uptake 101

CHARLES E. TANNER, HAI-CHOO LIM, AND GAETAN FAUBERT. *Trichinella spiralis:* Changes Caused in the Mouse's Thymic, Splenic, and Lymph Node Cell Populations 116

J. ZORZOPULOS, C. I. REICH, AND N. GALASSI. *Boophilus microplus:* Characterization of Larval Phosphomonoesterases and Isolation of Subcellular Fractions with High Phosphatase Activity 128

Christoph Högger, Ralph H. Estey, and Neil A. Croll. *Xiphinema americanum:* Cholinesterase and Biogenic Amines in the Nervous System 139

Number 2, August 1978

Leonor Leon, M. Ecilda Vasconcellos, Wilson Leon, Fernando S. Cruz, Roberto Docampo, and Wanderley De Souza. *Trypanosoma cruzi:* Effect of Olivacine on Macromolecular Synthesis, Ultrastructure, and Respiration of Epimastigotes 151

Thomas Trischmann, Herbert Tanowitz, Murray Wittner, and Barry Bloom. *Trypanosoma cruzi:* Role of the Immune Response in the Natural Resistance of Inbred Strains of Mice 160

John M. Robinson and Burton J. Bogitsh. *Hymenolepis diminuta:* Biochemical Properties of Peroxidase Activity in Mitochondria 169

I. M. Cesari and C. A. Marchiani. *Schistosoma mansoni:* Phospholipid Nature of the "Agglutinin" 175

J. Fruit, D. Afchain, A. Petitprez, and A. Capron. *Trypanosoma cruzi:* Location of a Specific Antigen on the Surface of Bloodstream Trypomastigote and Culture Epimastigote Forms 183

Celso Ramos, Edmundo Lamoyi, Miguel Feoli, Miguel Rodriguez, Morelia Perez, and Librado Ortiz-Ortiz. *Trypanosoma cruzi:* Immunosuppressed Response to Different Antigens in the Infected Mouse 190

Michael Gottlieb. *Trypanosoma cruzi:* Identification of a Cell Surface Polysaccharide 200

Stanley Himmelhoch and Bert M. Zuckerman. *Caenorhabditis briggsae:* Aging and the Structural Turnover of the Outer Cuticle Surface and the Intestine 208

S. Chia-tung Pan. *Trypanosoma cruzi:* Intracellular Stages Grown in a Cell-free Medium at 37 C 215

Pravatchai Boonlayangoor, Richard A. Albach, Malvin L. Stern, and Theodore Booden. *Entamoeba histolytica:* Uptake of Purine Bases and Nucleosides during Axenic Growth 225

J. Russell Major, Jr. and M. D. Ruff. *Eimeria* Spp.: Influence of Coccidia on Digestion (Amylolytic Activity) in Broiler Chickens 234

David J. Weiner and E. J. L. Soulsby. *Litomosoides carinii:* Effect of Splenectomy on the Ability of Naive *Mastomys natalensis* to Accept Transplanted Adults 241

Burton J. Bogitsh. *Schistosoma mansoni:* Uptake of Exogenous Hemeproteins by Schistosomules Grown *in Vitro* 247

Marvin B. Rhodes, Rose A. McCullough, Charles A. Mebus, and Carol A. Klucas. *Ascaris suum:* Specific Antibodies in Isolated Intestinal Loop Washings from Immunized Swine 255

M. Abbas and W. E. Foor. *Ascaris suum:* Free Amino Acids and Proteins in the Pseudocoelom, Seminal Vesicle, and Glandular Vas Deferens ... 263

S. Chia-tung Pan. *Trypanosoma cruzi: In Vitro* Interactions between Cultured Amastigotes and Human Skin-muscle Cells 274

George L. Stewart, Frank M. Fisher, Jr., Elisa Ribelles, Vanessa Chiapetta, and Rebecca LaBrum. *Trichinella spiralis:* Alterations of Blood Chemistry in the Mouse 287

Experimental Parasitology

Instructions to Authors

Experimental Parasitology publishes research papers on the experimental forefront of parasitology and significant reviews of all aspects of parasitism. There are no page charges; fifty gratis reprints of each article are provided. Research papers are not solicited but should be submitted to the editors. Reviews may be submitted or invited; before preparing an unsolicited review, inquiry should be made and an outline of the manuscript should be submitted. All manuscripts and editorial correspondence may be addressed to the editor or associate editors, whose names and addresses appear facing the inside front cover. Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper. In addition, it is understood that any person cited as a source of personal communications has approved such citation; written authorization concerning such consent may be required at the Editor's discretion. Signed articles and other material published in *Experimental Parasitology* represent the opinions of the authors and should not be construed to reflect the opinions of the Editors and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Language. The Journal publishes in French, German, Spanish, and English. Whichever the language, it should be used idiomatically.

Copies. Manuscripts should be submitted in triplicate, typed with double-spaced lines and wide margins on standard size white paper (about 21.5 × 28 cm).

Title. If possible, the specific designation of the parasite, followed by a colon, should precede the rest of the title. The common or scientific name of the host should appear at the end of the title (e.g., *Ascaris suum* and *Phocanema decipiens*: Cross Immunity in Orally Infected Pigs and Rats). For review manuscripts, the title, as described above, should be preceded by the heading, in capital letters: A REVIEW.

Credits and Disclaimers. Avoid footnotes. Disclaimers, funding support, and other circumstantial information should be included in the *Acknowledgments* section.

Authors and Their Addresses. The full professional mailing addresses of all authors must be included with their names. When co-authors are at different institutions, the different addresses should follow each author's name. Only if a change of address has occurred, should a footnote be used to indicate the author's present address. The manuscript title and the author's name and address should be the only material appearing on page 1 of the manuscript.

Publication Dates. The date on which a manuscript is accepted will be inserted after the author's name and address.

Form. Following the title and author page (page 1), each research manuscript should contain the following sections and headings: *Abstract, Index Descriptors, Introduction, Materials and Methods, Results, Discussion, Acknowledgments* (if any), *References.* Pages should be numbered consecutively from the title–author page through the references. Departure from this format should be justified in a separate letter. The format for reviews is identical with that for experimental papers up to and including the *Introduction.* The body of the review should be divided in a manner appropriate to the subject matter. Acknowledgments (if any) and references should follow the body of the review and the pagination should be continuous. Long reviews may have an *Outline* between the *Index Descriptors* and *Introduction.*

Abstract. The abstract must be factual (not indicative).

Index Descriptors. A list of key words and phrases should follow the abstract. They should reflect the contents of the paper accurately and help to describe it to scientific nonexpert

readers. The taxonomic designations of all organisms discussed in a manuscript must be included. Larger taxonomic categories should also be mentioned (e.g., in a paper on *Watsonius watsoni,* the term "trematode" should appear as an index descriptor).

References. Literature is to be cited in the text by the author's surname and date (e.g., Glaser and Stoll 1940), not by number. The reference list should be arranged first alphabetically by name and secondarily by date. Each reference should consist of the names of all authors, the date of publication, the exact title, the full name (do not abbreviate) of the journal, the volume, and the inclusive pages as in the following examples.

Taliaferro, W. H., and Taliaferro, L. G. 1922. The resistance of different hosts to experimental trypanosome infections with special reference to a new method of measuring the resistance. *American Journal of Hygiene* 2, 264–319.

Stauber, L. A. 1970. Leishmanias. *In* "Immunity to Parasitic Animals" (Jackson, G. J., Herman, R., and Singer, I., Eds.), Vol. 2, pp. 739–765. Appleton-Century-Crofts, New York.

Illustrations. One copy of each figure should be submitted as a glossy photographic print or as the original drawing with the best copy of the manuscript. Tables must be typed. If adequate for reviewers' perception, photoduplicated copies of figures may accompany the two other copies of the manuscript. A number should be given to figures, tables, or illustration legends, but not to the pages on which they appear. Place only one table on a sheet of paper. When illustrations refer to parasite or host, the name of the organism should be spelled out completely at least once in each table heading or figure legend.

Special Nomenclature, Abbreviations, etc. Consult the biology editor's style manual [Council of Biology Editors' Committee on Form and Style. 1972. "CBE Style Manual" (3rd ed.). American Institute of Biological Sciences (3900 Wisconsin Avenue, N.W., Washington, D.C., 20016, U.S.A.)] for the principles of overall style and such details as appropriate abbreviations.

Whenever electron microscopy is the subject of reporting the accepted unit is the micrometer, μm. The magnification of all electron and light micrographs should be indicated by a bar on the print.

Whenever enzymes are the subject of reporting, the Enzyme Commission (EC) number must be used for accurate identification and retrieval purposes in the text, summary, and index descriptors; EC numbers may be found in: International Union of Pure and Applied Chemistry and International Union of Biochemistry. 1972. "Enzyme Nomenclature Recommendations" (American Elsevier Publishing Co., 52 Vanderbilt Ave., New York N.Y. 10017, U.S.A.).

Proofs. Galleys proofs will be sent to the author with a reprint order form. Authors will be charged for excessive alterations.

Reprints. Fifty reprints of each article are granted free of charge and authors may order additional quantities using the reprint order form provided with the galley proofs.
